

# Niches

Creating space within existing walls is achieved through the application of niches. Available in a variety of lengths and depths as well as architectural styles, niches create new spaces that may be used for both display purposes, or to create special lighting effects or simply alone as a design element. While niches are often semicircular in plan surmounted by a half dome, HYDE PARK is able to create entirely new designs from your plans or we can work with you to create a design.
